

Simurgh

Milestone 2

Project Management Tool: Asana

Requirements

- Users should be able to select their interests and their skill level in that interest from a list of options.
- Simurgh must present a collage of relevant resources based according to the user's input.
- Users should be able to provide feedback for any article, paper, video, or any other information source they access.
 - Simurgh must use this feedback to update the collage for future users.

Project Plan

- Sprint 1
 - Define essential functionality for the project.
 - Create basic working website with no UI.
 - Initialize a working back-end database with PHP.
 - Create a simple algorithm to present the users with relevant sources according to the input provided.
 - Split up tasks within group based on preference and/or skill level in given task.
 - Host the website on a domain for external testers.
 - Establish a GitHub repository for code backup and collaboration.
- Sprint 2
 - Expand the functionality for the project.
 - Add ability for users to post their own links.
 - Talk to computer science professors and students to help fill up links for different inputs.
 - Create a feedback system for users who have visited a source.
 - Sort links based on feedback system.
- Sprint 3
 - Design an appealing user interface.
 - Organize the links into a collage with thumbnails and animations.
 - Work on creating a refined user experience.
